**INTERNATIONAL CONFERENCE ON MULTIDISCIPLINARY STUDIES AND EDUCATION:** a collection scientific works of the International scientific conference – London, England, 2025. Issue 4

**Languages of publication:** Uzbek, English, Russian, German, Italian, Spanish

The collection consists of scientific research of scientists, graduate students and students who took part in the International Scientific online conference «**INTERNATIONAL CONFERENCE ON MULTIDISCIPLINARY STUDIES AND EDUCATION**». Which took place in London , 2025.

Conference proceedings are recommended for scientists and teachers in higher education establishments. They can be used in education, including the process of post - graduate teaching, preparation for obtain bachelors' and masters' degrees. The review of all articles was accomplished by experts, materials are according to authors copyright. The authors are responsible for content, researches results and errors.

## PRACTICAL TIPS FOR TEACHING

**Annotation:** This thesis is devoted to the topic “Practical Tips for Teaching.” Nowadays The educational environment, the use of innovative approaches, interactive methods, and practical strategies has become increasingly important. A teacher must organize the learning process based on modern requirements, encouraging students to be active, creative, and independent thinkers. The paper discusses the main practical principles of effective teaching, ways to improve teaching performance, and useful methodological recommendations that can be applied in classroom practice.

**Keywords:** Teaching, methodology, learner activity, motivation, interaction.

**Introduction:** In the current period of globalization, education is regarded as one of the main factors for unlocking human potential. Every teacher should strive to arrange lessons based on modern, interactive, and practical methods. Lessons that hold students actively in the learning process are far more effective than those relying solely on memorization. Hence, the topic “Practical Tips for Teaching” is highly relevant today as it plays a crucial function in making better the quality of education and promoting learner-centered instruction.

**Main Part:** To increase the effectiveness of the learning process, several practical recommendations should be considered.

First of all, every lesson must have a clear objective and expected outcome. The teacher should explain the purpose of the lesson so that students understand what they are expected to learn and achieve.

Secondly, lessons should apply the principle of “learning by doing,” which helps students acquire and retain knowledge more effectively. For instance, theoretical content should be reinforced through real-life practice and problem-solving tasks.

The third important point is the use of interactive methods, such as role play, brainstorming, pair work, and project work. These activities help learners express their ideas freely, develop teamwork skills, and enhance communication abilities.

Fourth, teachers should apply scaffolding, meaning step-by-step support for students. At the beginning, more guidance may be needed, but as students gain confidence, the teacher gradually reduces assistance to encourage independence.

Another key aspect is motivation. A teacher should promote a positive learning environment through encouragement, recognition of small successes, and constructive feedback. This increases students' enthusiasm and desire to learn.

Providing feedback at the end of each lesson is equally important. It helps students reflect on what they have learned, identify areas for improvement, and take responsibility for their progress.

Finally, teachers should analyze and evaluate their own teaching practices regularly. Reflecting on which methods worked effectively and which did not allows teachers to continuously improve and adapt their instructional techniques.

**Conclusion:** In conclusion, the most important task for every teacher is to place the learner at the center of the educational process. Each stage of the lesson should contribute to student engagement, independent thinking, and the development of practical skills. The recommendations outlined in "Practical Tips for Teaching" can help educators design lessons that are more interesting, effective, and aligned with modern educational standards. Such an approach not only enhances the quality of knowledge but also strengthens learners' motivation, confidence, and active participation in the classroom.
